this is the ebook version of the printed book the past few years have seen the rise of agile or evolutionary methods in software development these methods embrace change in requirements even late in the project the ability to change software is because of certain practices that are followed within teams such as test driven development pair programming and continuous integration continuous integration provides a way for software teams to integrate their work more than once a day and promotes confidence in the software that is being developed by the team it is thought that this practice is difficult to apply when continuously integrating the database with application code hence evolutionary database development is considered a mismatch with agile methods pramod sadalage shows that this is not necessarily true continuous integration changed the way software is written

extreme programming refactored the case against xp featuring songs of the extremos takes a satirical look at the increasingly

hyped extreme programming xp methodology it explores some quite astonishing extremo quotes that have typified the xp approach quotes such as xpers are not afraid of oral documentation schedule is the customer s problem dependencies between requirements are more a matter of fear than reality and concentration is the enemy in between the chuckles though there is a serious analysis of xp s many flaws the authors also examine c3 the first xp project whose team most of whom went on to get xp book deals shortly before c3 s cancellation described themselves as the best team on the face of the earth in a later chapter the authors also note that one problem which can affect pair programmers is overconfidence or is that excessive courage the authors examine whether the problems that led to c3 s inexplicable cancellation could also afflict present day xp projects in the final chapter refactoring xp matt and doug suggest some ways of achieving the agile goals of xp using some xp practices used in moderation combined with other less risk laden methods
